## Program Description

Eat-Da-Burger logger with MySQL, Node, Express, Handlebars and a homemade ORM (yum!). Built with the MVC design pattern, Node and MySQL to query and route data, and Handlebars to generate the HTML. The app is deployed to Heroku and the database is linked via JAWSDB.

## Repo and Heroku App Links

- [Link to GitHub Repo - https://github.com/Burger/](https://github.com/Burger/)
- [Link to Heroku App - https://quinlan-burger.herokuapp.com/](https://quinlan-burger.herokuapp.com/)

## Installation Instructions

Run the command "npm i" to install dependencies

## Usage information

To use the application, run the command "node server.js"

## Licenses

none

## Contributing

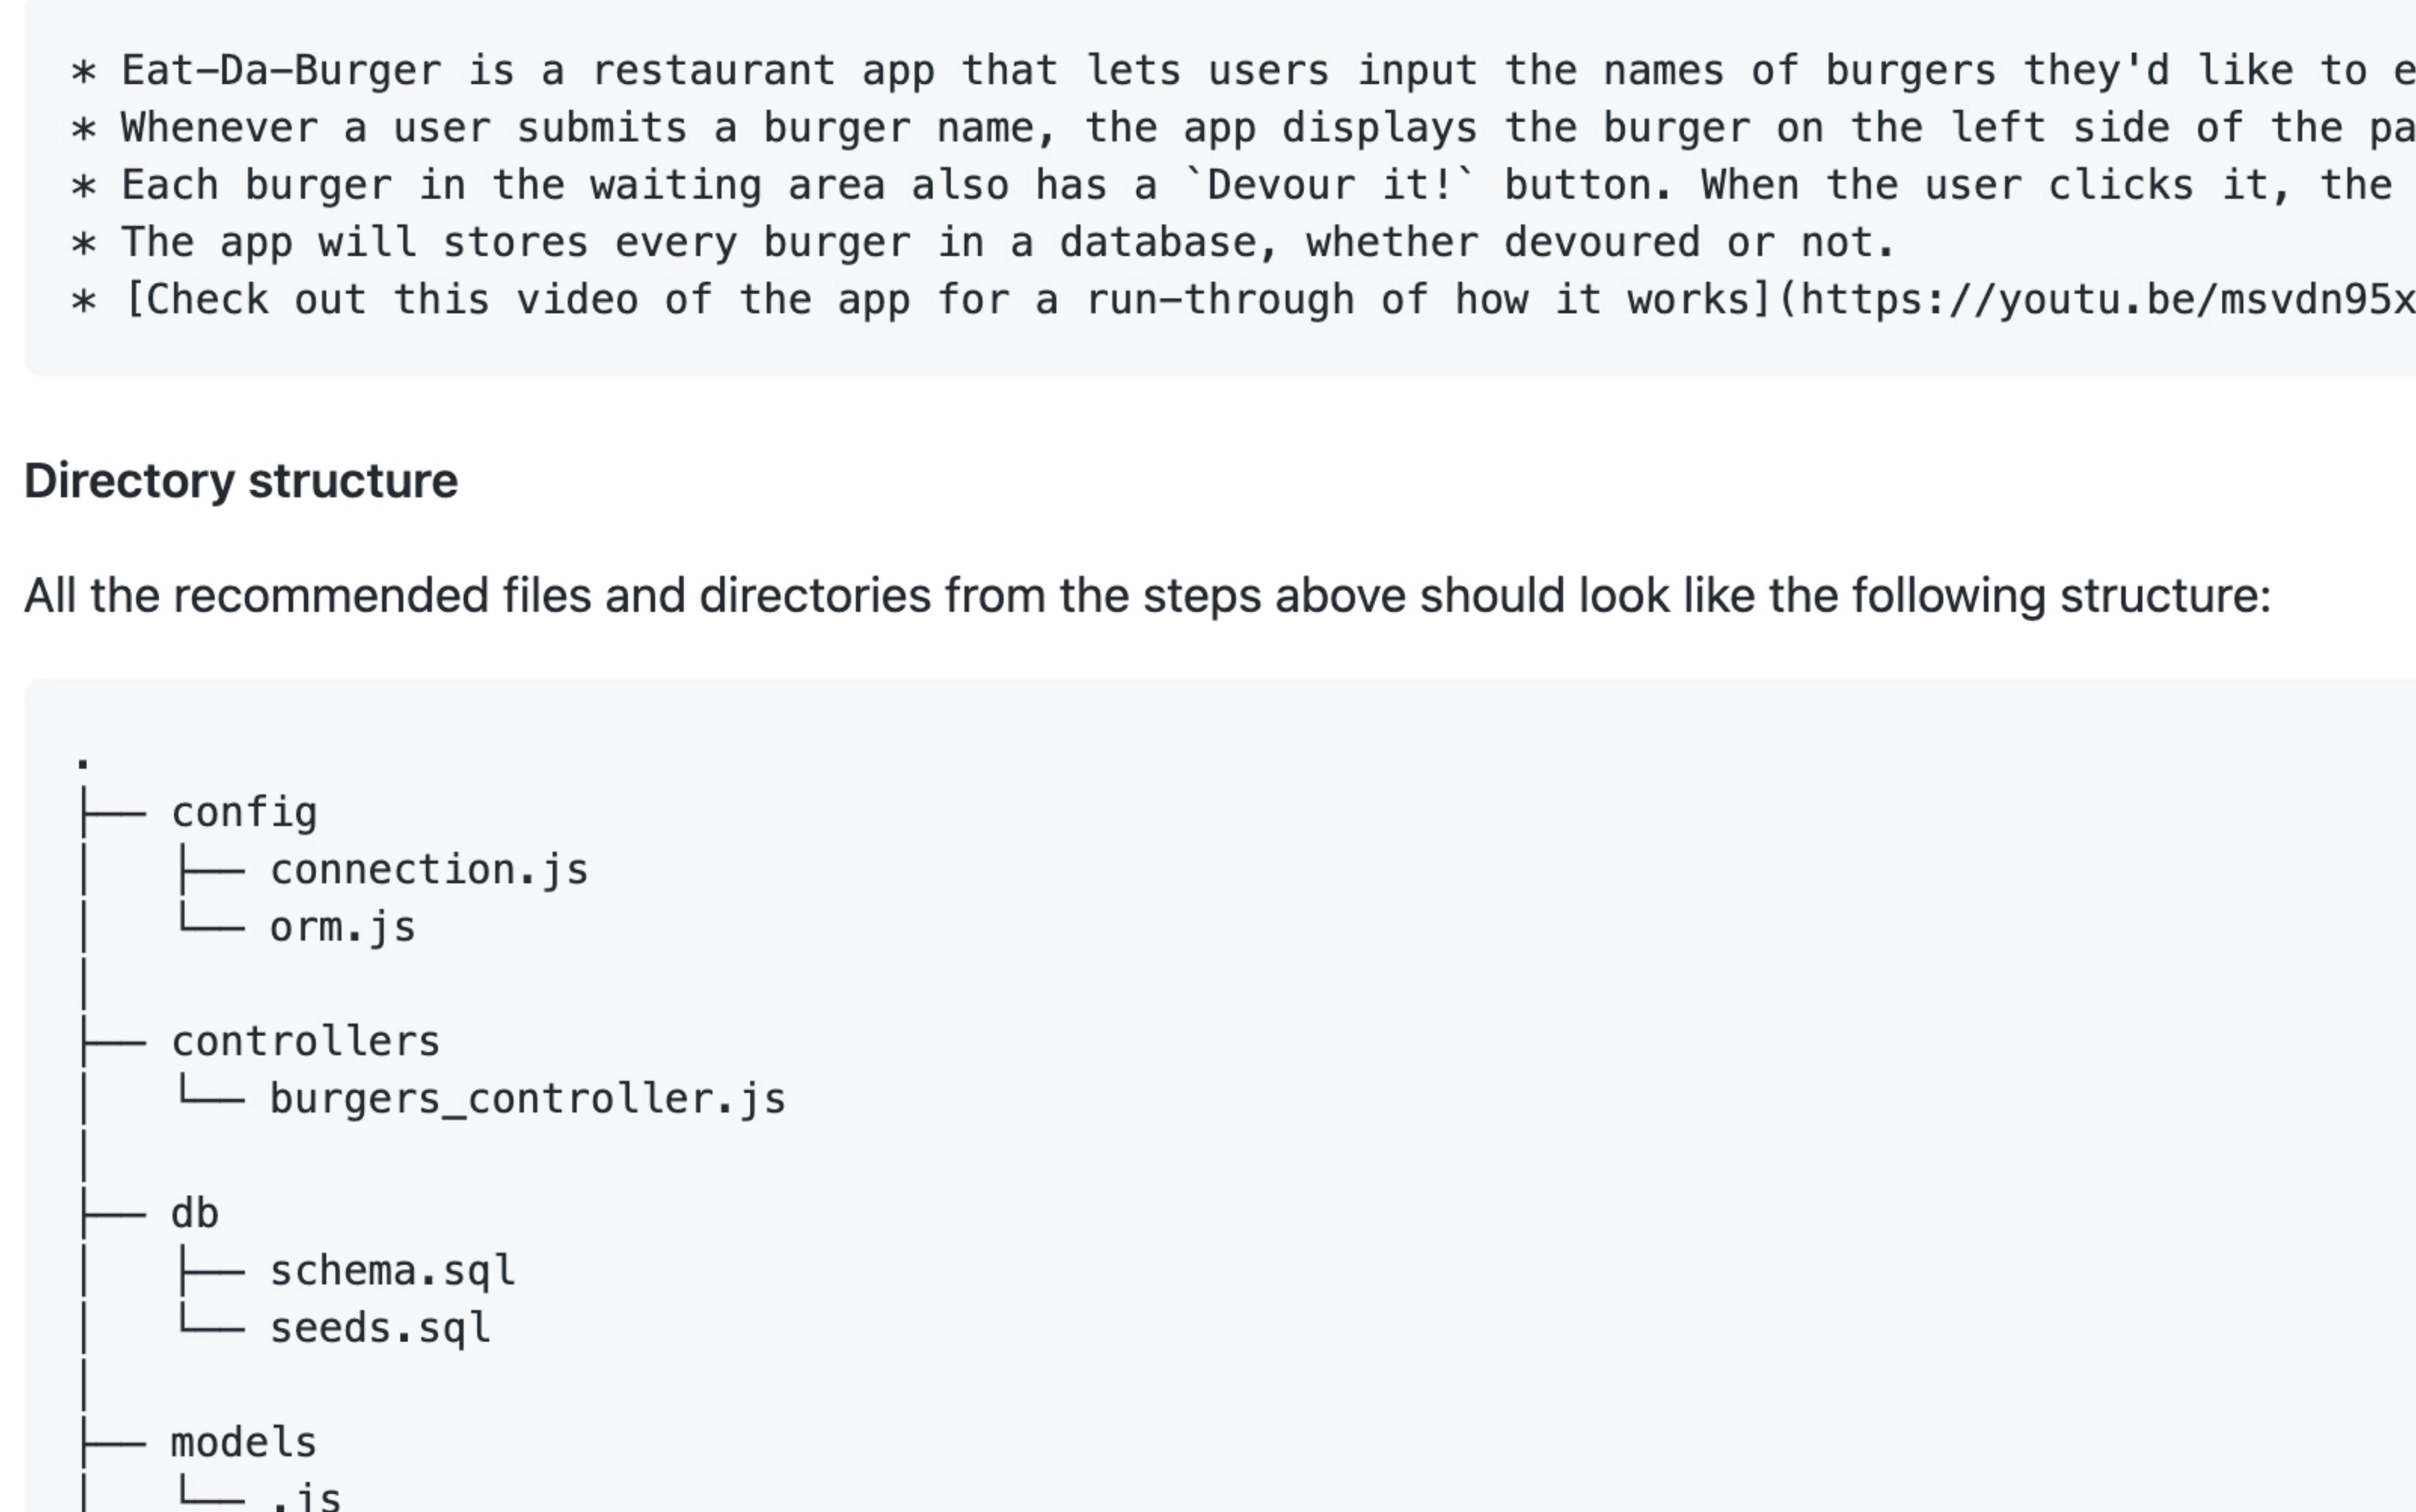

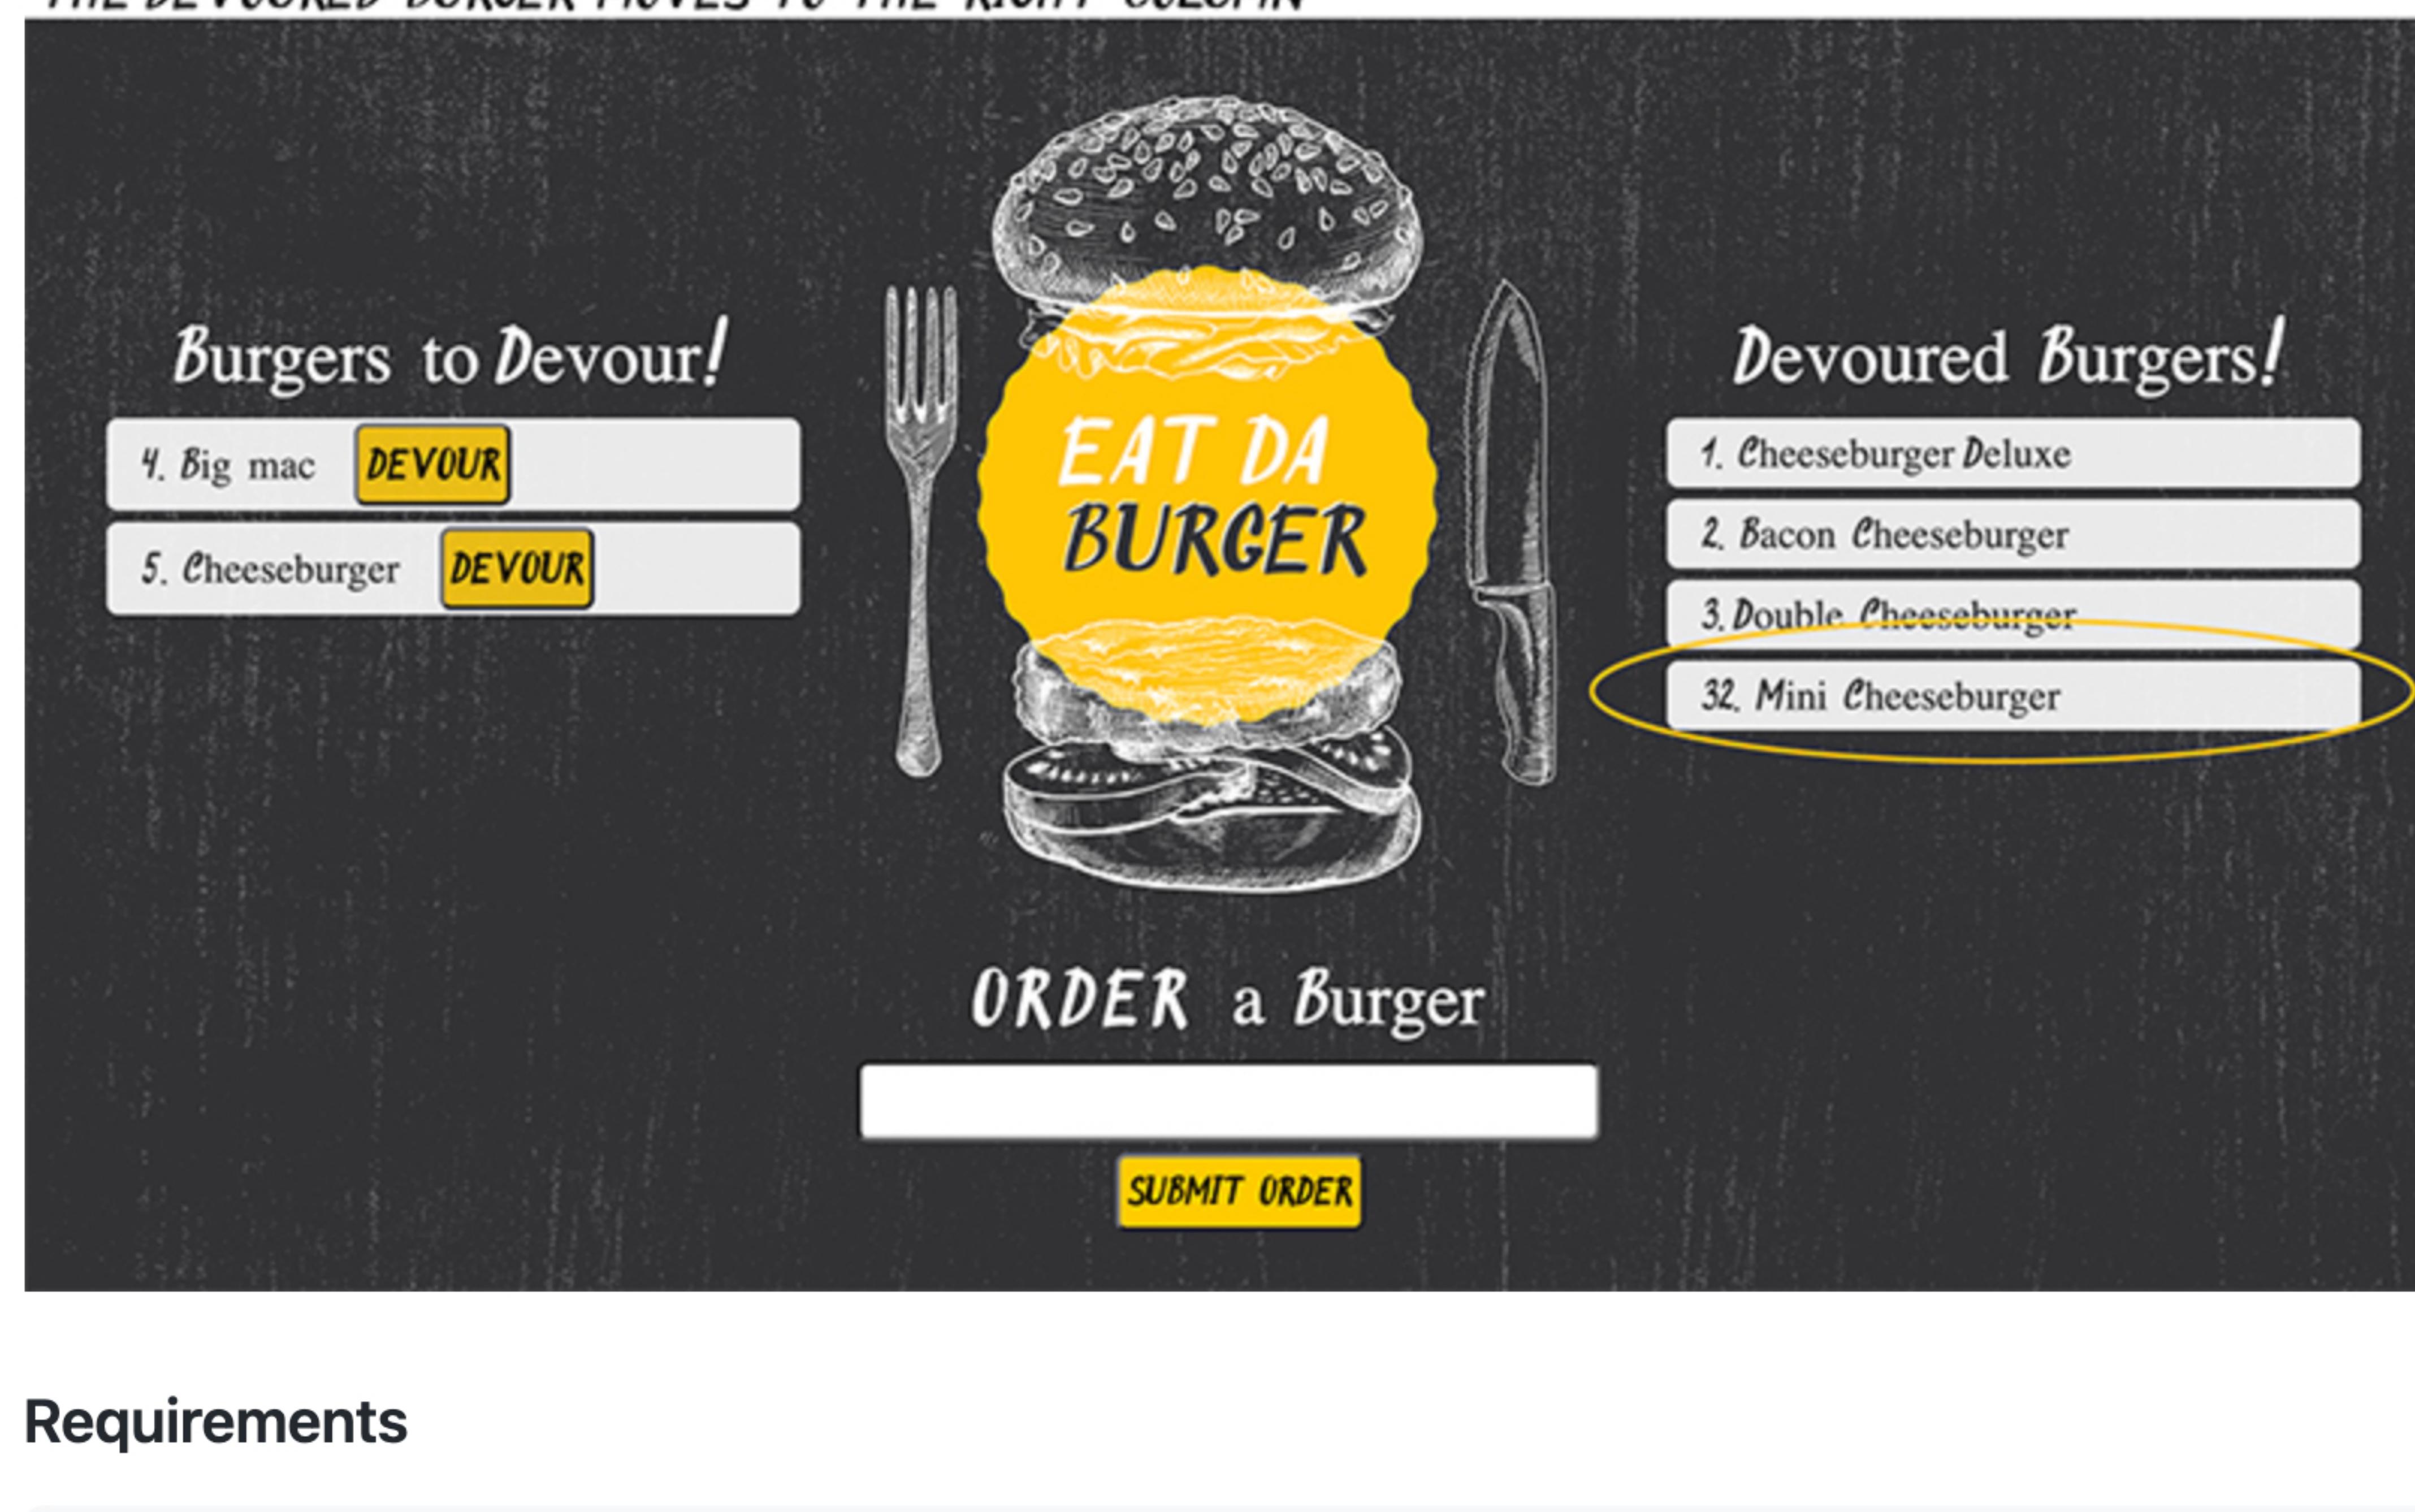

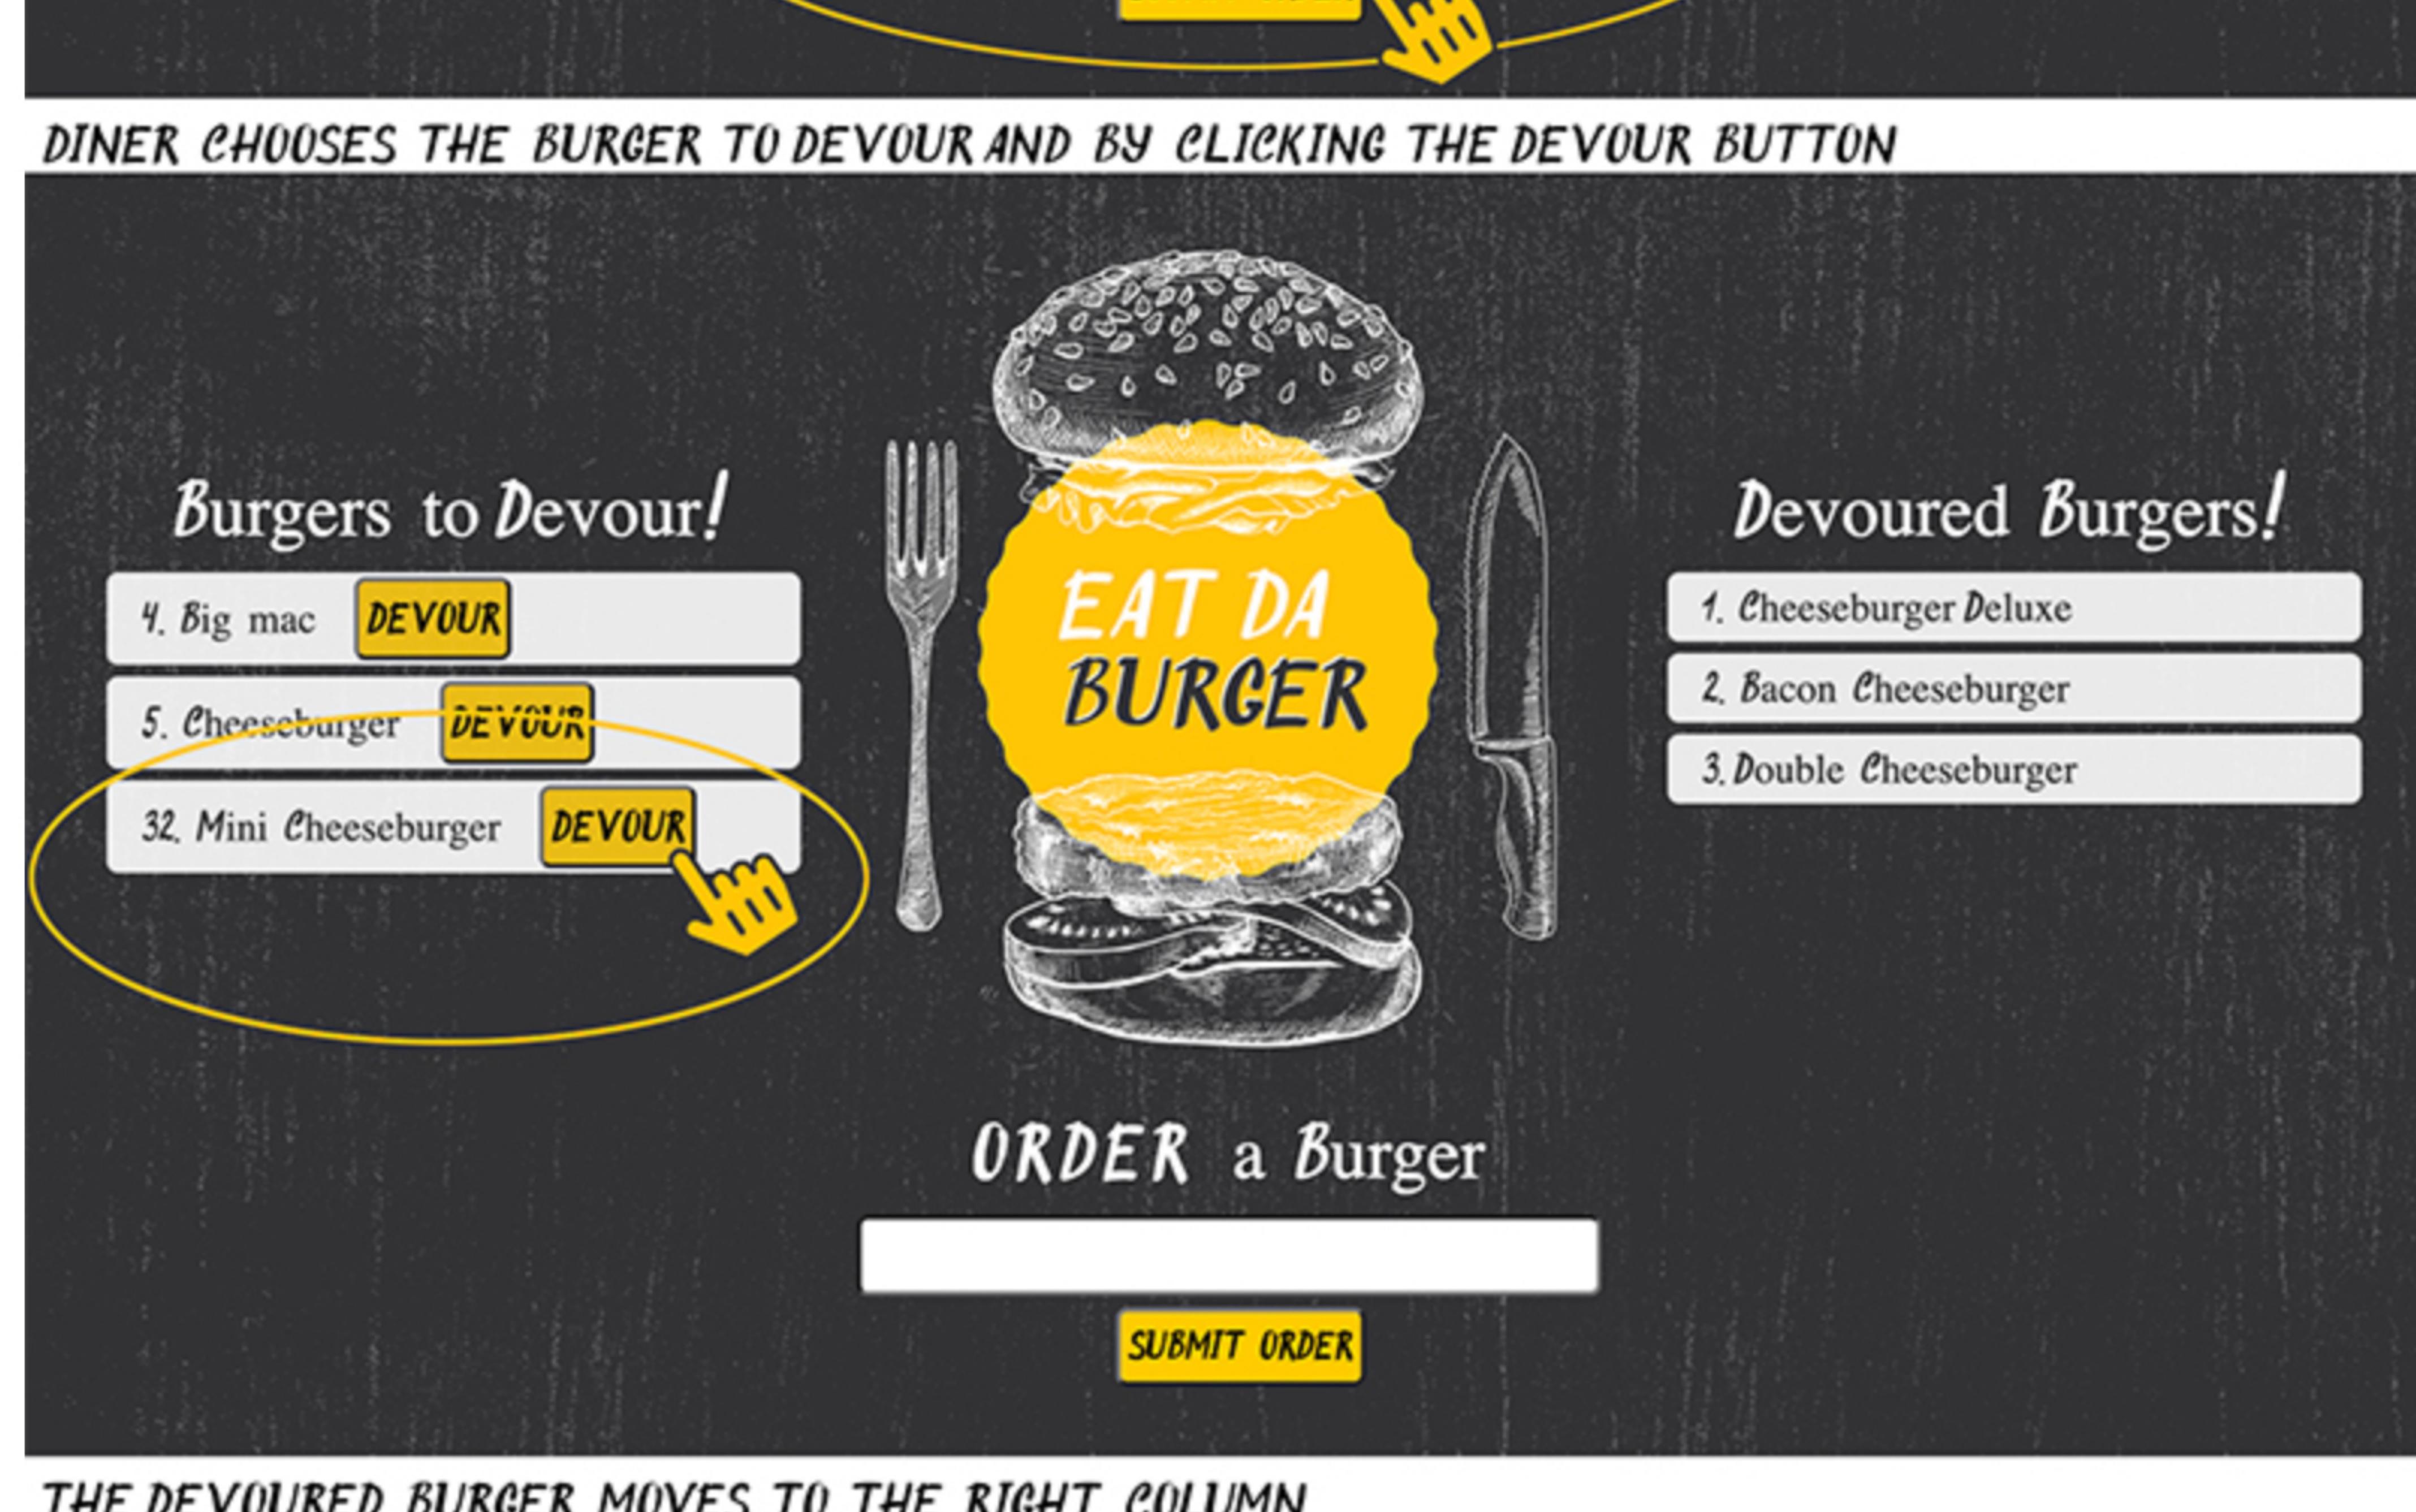

none

## Requirements

- \* Eat-Da-Burger is a restaurant app that lets users input the names of burgers they'd like to eat.
- \* Whenever a user submits a burger name, the app displays the burger on the left side of the page -- waiting to be devoured.
- \* Each burger in the waiting area also has a 'Devour it!' button. When the user clicks it, the burger will move to the right column.
- \* The app will stores every burger in a database, whether devoured or not.
- \* [Check out this video of the app for a run-through of how it works](https://youtu.be/msvdn95x90M).

## Directory structure

All the recommended files and directories from the steps above should look like the following structure:

```
.  
  config  
    connection.js  
    orm.js  
  controllers  
    burgers_controller.js  
  db  
    schema.sql  
    seeds.sql  
  models  
    .js  
  node_modules  
  package.json  
  public  
    assets  
      css  
        burger_style.css  
      img  
        .png  
  server.js  
  views  
    index.handlebars  
    layouts  
      main.handlebars
```

## Functionality

The following npm modules were used:

```
mysql  
express  
express-handlebars
```
